

VNXAU Menace — Route Map

Generated 2026-06-20 10:48 UTC · github.com/Giansensey007/VNXAU_menace

Configuration snapshot

Treasury VNXAU home	platform-only (idle VNXAU on VNX)
Closed loop	after every arb (return leg always runs)
Trade size	0.5–5 VNXAU
Min profit	\$5.00 round-trip
VNX platform order min	0.4 VNXAU
VNX deposit min (BASE/SOL/ETH VNXAU)	5 VNXAU cumulative
VNX deposit min (ETH USDC)	20 USDC
enable_vnx_cctp_routes	true
enable_vnx_arb_routes	true

Chain inventory model

- **Platform (VNX):** all idle VNXAU + USDC for `vnx_to_*` buys
- **Base:** USDC only (no idle VNXAU; dust swept to platform)
- **Solana:** USDC only (no idle VNXAU)
- **Ethereum:** USDC hub buffer + gas (no idle VNXAU)
- **VNX ETH = USDC only:** platform credits USDC deposits on Ethereum — never USDT

Arbitrage routes (8 directed pairs)

base_to_solana (DISABLED)

Group	base_sol
Buy leg	base
Sell leg	solana
Ends on	solana USDC
Legacy inverse	solana_to_base
Closed-loop return	solana_to_base
1. Spend Base USDC → buy VNXAU (KyberSwap)	
2. Deposit VNXAU to VNX (BASE, min 5 VNXAU cumulative)	
3. Withdraw VNXAU to Solana	
4. Sell VNXAU for Sol USDC (Jupiter)	
5. Wormhole USDC rebalance Base ↔ Sol (stable leg)	

solana_to_base (DISABLED)

Group	base_sol
Buy leg	solana
Sell leg	base
Ends on	base USDT
Legacy inverse	base_to_solana
Closed-loop return	base_to_solana
1. Spend Sol USDC → buy VNXAU (Jupiter)	
2. Deposit VNXAU to VNX (SOL, min 5 VNXAU)	
3. Withdraw VNXAU to Base	
4. Sell VNXAU for Base USDC (KyberSwap)	
5. Wormhole USDC rebalance	

base_to_vnx (DISABLED)

Group base_vnx
Buy leg base
Sell leg vnx
Ends on vnx USDC
Legacy inverse vnx_to_base
Closed-loop return vnx_to_base

1. Spend Base USDC → buy VNXAU on Base (KyberSwap)
2. Deposit VNXAU to VNX platform (BASE)
3. Platform sell VNXAU for USDC
4. Hub return: Wormhole Base USDC → ETH → VNX deposit

vnx_to_base (ACTIVE)

Group base_vnx
Buy leg vnx
Sell leg base
Ends on base USDT
Legacy inverse base_to_vnx
Closed-loop return base_to_vnx

1. Platform buy VNXAU (min 0.4 VNXAU order)
2. Withdraw VNXAU to Base
3. Sell VNXAU for Base USDC (KyberSwap)

solana_to_vnx (DISABLED)

Group vnx_sol
Buy leg solana
Sell leg vnx
Ends on vnx USDC
Legacy inverse vnx_to_solana
Closed-loop return vnx_to_solana

1. Spend Sol USDC → buy VNXAU (Jupiter)
2. Deposit VNXAU to VNX (SOL, min 5 VNXAU)
3. Platform sell VNXAU for USDC
4. CCTP reconcile (Sol USDC ↔ ETH USDC probe)

vnx_to_solana (ACTIVE)

Group vnx_sol
Buy leg vnx
Sell leg solana
Ends on solana USDC
Legacy inverse solana_to_vnx
Closed-loop return **cctp_sol_usdc_to_vnx** (CCTP USDC path)

1. Platform buy VNXAU (min 0.4 VNXAU order)
2. Withdraw VNXAU to Solana
3. Sell VNXAU for Sol USDC (Jupiter)

ethereum_to_vnx (DISABLED)

Group	eth_vnx
Buy leg	ethereum
Sell leg	vnx
Ends on	? ?
Legacy inverse	—
Closed-loop return	—
1. Spend ETH USDC → buy VNXAU on Ethereum (KyberSwap)	
2. Deposit VNXAU to VNX platform (ETH)	
3. Platform sell VNXAU for USDC	

vnx_to_ethereum (ACTIVE)

Group	eth_vnx
Buy leg	vnx
Sell leg	ethereum
Ends on	? ?
Legacy inverse	—
Closed-loop return	—
1. Platform buy VNXAU (min 0.4 VNXAU order)	
2. Withdraw VNXAU to Ethereum	
3. Sell VNXAU for ETH USDC (KyberSwap)	

Synthetic return route

cctp_sol_usdc_to_vnx

1. Burn Sol USDC via Circle CCTP → Ethereum
2. Claim USDC on ETH hot wallet
3. Deposit USDC to VNX platform (ETH, min 20 USDC)
4. Platform buy VNXAU with credited USDC
5. *Return leg after vnx_to_solana when origin = platform*

Closed-loop matrix

Origin	Primary	Return leg	Ends on
Base USDC	base_to_solana	solana_to_base	Base USDC
Base USDC	base_to_vnx	vnx_to_base	Base USDC
ETH USDC	ethereum_to_vnx	vnx_to_ethereum	ETH USDC
Sol USDC	solana_to_vnx	vnx_to_solana	Sol USDC
Sol USDC	solana_to_base	base_to_solana	Sol USDC
Platform	vnx_to_base	base_to_vnx	Platform USDC
Platform	vnx_to_ethereum	ethereum_to_vnx	Platform USDC
Platform	vnx_to_solana	cctp_sol_usdc_to_vnx	Platform VNXAU

Hub & rebalance routes (matrix test steps, not scanner arb)

Step ID	Flow
eth_to_vnx	ETH USDC → VNX platform USDC deposit
vnx_to_eth	VNX platform USDC → ETH hot wallet withdraw
cctp_sol_to_eth	Sol USDC → ETH USDC (Circle CCTP)
cctp_eth_to_sol	ETH USDC → Sol USDC (Circle CCTP)
wormhole_base_to_eth	Base USDC → ETH USDC (Wormhole)
wormhole_eth_to_base	ETH USDC → Base USDC (Wormhole)
base_usdc_to_vnx_usdc	Base USDC → Wormhole → ETH USDC → VNX USDC
